Wolves can detect sounds generated six miles away in a forest, and even farther away in open country. Be very quiet, listen closely, now draw the sound.

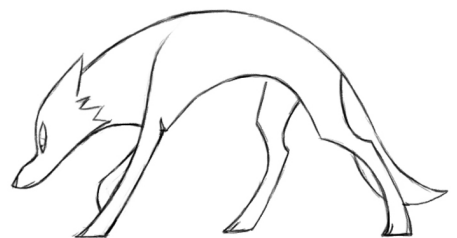

Wolves are excellent at sneaking up on people,
try drawing someone without them noticing.

Wolves see a more limited spectrum of colour than humans; they almost see the world in black and white. Look around, pick something colourful and draw it in black and white.

A wolf's sense of smell is about one hundred times more powerful than a human's. Inhale deeply through your nose, now draw what you smell.

Wolves are free spirits and very skilled at howling.
Let's hear you howl. Now draw yourself as a wolf.
